The graph illustrates the projected increase in the percentage of the population aged 65 and over. The x-axis represents the year, from 1950 to 2050, with major grid lines every 10 years. The y-axis represents the percentage of the population aged 65 and over, from 0 to 40, with major grid lines every 5 units. A solid line shows the projected trend, starting at approximately 12% in 1950, rising to about 20% in 1975, and then sharply increasing to approximately 30% by 2050. A shaded area around the line indicates the range of possible outcomes, which widens significantly after 1975, reaching a range of approximately 25% to 35% by 2050.
